EDUCATION

Pashchimanchal Campus <i>Bachelors in Mechanical Engineering</i>	Pokhara-16, Lamachaur Jan 2023 - Present
Gogan Secondary School <i>XII, Science Stream (NEB)</i>	Pokhara-32, Gagangauda 2020 - 2022

SKILLS

Computer Skills: Fusion 360, Python, Solidworks, Microsoft Office, C, AutoCAD
Managerial Skills: Group Collaboration, Problem Solving, Effective Communication, Presentation

EXPERIENCE

General Member Robotics Club <i>Pashchimanchal Campus</i>	March 2024 - Feb 2025
- Taught students several classes about mechanical design concepts, electronic components, microcontrollers and 3D printing during the rainy and winter sessions organized by the club. - Mentored a team that came first in the autonomous boat racing competition. - Helped in organizing competitive events by collaborating with industries for sponsorships. - Provided feedback and suggestions on projects like micromouse, line following bot, and autonomous boat.	

VOLUNTEER

Robotics Mentor <i>Karyasala and Engineers Without Border</i>	July 2024, 7 days
- Guided students of Motherland Secondary School through the whole 7 day session on Robotics and 3D printing, reviewed their code and provided feedback on their work. - Mentored a group of students to build a bluetooth controlled car using Esp32 microcontroller.	
Robotics Instructor <i>Birethanti Secondary School</i>	Feb 2025, 3 days
- Prepared a course and taught students of grade 10-12 the basics of robotics (Electronic components, Microcontrollers, Motors, Drivers) by forming a team of five people. - Helped the students build projects (Robotic arm, Home automation, Line following bot) for the exhibition on their annual school day.	

PROJECTS

RC Airplane Fabrication, Prototyping and Testing	Oct 2024 - Dec 2024
- Collaborated with team members to research about RC planes and built the body of the plane using locally available materials (Styrofoam). - Selected a Clark-Y airfoil shape for its properties and successfully fabricated a wing based on its profile. - Tested and made several modifications to the plane to make sure it can fly and land safely. - Competed in Aeromodelling competition at Techfest where we passed selection criteria and at Mechtrix where we came first in the endurance category.	
Robotic Arm 3D Design, Fabrication	Feb 2026- present
- Designed the base, links and outer structures of a 5 DOF Robotic arm in Fusion 360. - Selected cycloidal and planetary gears for the gear reduction and designed the parts in Fusion. - Selected suitable aluminum profiles for the body and designed some parts that can be 3D printed.
